NUCOR[®]
BUILDINGS GROUP

DESIGN WITH RA

Choose racking systems for your building during the initial design phase from a single-source provider.

Planning for racking during the design phase of your building project helps you maximize space efficiency, realize cost savings early, and optimize column spacing for the best possible fit of racking systems. Waiting until after the building is designed to consider racking options can lead to higher costs, potential limitations due to column interference, diminished storage capacity, and less flexible layouts.

RACKING IN MIND

NUCOR[®] + **NUCOR[®]**
BUILDINGS GROUP **WAREHOUSE SYSTEMS**

When you work with Nucor Buildings Group, incorporating racking systems from the start is simple. Let us know you'd like this option included in your initial building plan, and our partners at Nucor Warehouse Systems will begin making that happen. Their fabrication and onsite management expertise make them the ideal team for delivering efficient, racking-ready solutions.

WAREHOUSE EXPERTS OVERSEE YOUR PROJECT FROM START TO COMPLETION

Nucor Warehouse Systems offers complete solutions for managing your projects. Our experts design, supply, and install each solution tailored for the unique needs of your operation. Through every step of the process, we provide the high quality service our partners not only expect, but deserve. By ensuring your needs are met and everything works together flawlessly, we can reduce the burden and risk that comes from trying to coordinate multiple contractors.

WAREHOUSE RACKING PRODUCTS

We offer a comprehensive selection of products tailored to meet diverse warehouse storage needs. Our team of experts will work closely with you to recommend the best system for your customer, ensuring you achieve the most efficient, cost-effective solution for your warehouse.

With 10 roll-form lines, two continuous welded one-piece beam lines, robotic welding capabilities, high-speed laser cutting and punching capabilities and five powder coating booths, we offer the most diverse product line in the country through our offerings in the structural, roll form, tubular and cantilever product lines.

Selective Rack

Selective rack allows any pallet load to be accessed without having to move any other pallets, making it an efficient and cost-effective solution for most warehouse configurations.

Pushback

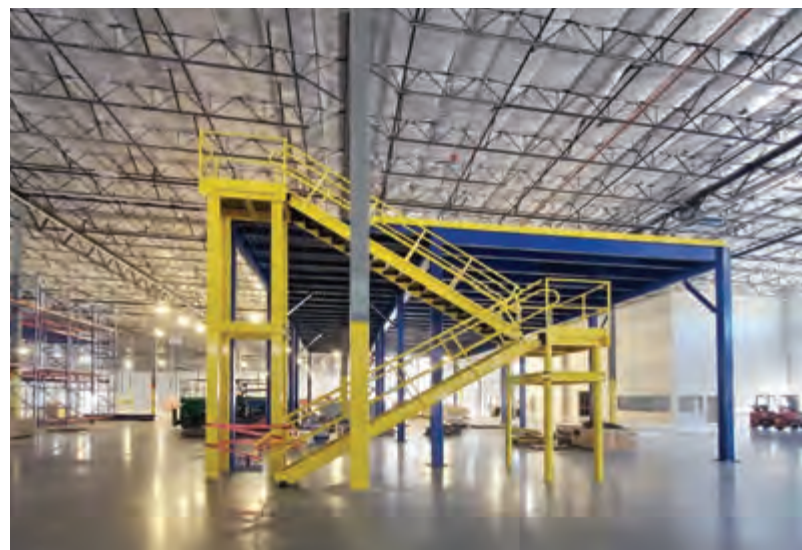

A high-density storage solution, allowing storage anywhere from two to six pallets deep. Enables immediate availability of product via independently accessible lanes and easy access to SKUs.

Drive-In

Pallets can be stored multiple positions deep, which cuts down on aisle space required to access other systems. Drive-In racking systems offer high density storage solutions that are both versatile and cost effective.

Carton/Pallet Flow

Best solutions for deep lane storage, easy access, and high versatility. Our pallet flow offers FIFO controlled pallet handling, steel and polycarbonate wheels and customization to meet various pallet and load sizes.

Mezzanines + Platforms

Mezzanines and platforms utilize existing overhead space to create additional working, office, storage, or manufacturing areas at a lower cost than construction of a new facility. They are an efficient and economical choice that can be easily installed and added quickly so you can expand at the rate your projects demand.

OUR ONLY LIMITATIONS ARE THE NEEDS OF OUR CUSTOMERS

Nucor Warehouse Systems works with businesses of all sizes — from massive distribution centers for some of the leading supply chain contributors in the country to more conservative, local operations. By offering solutions for warehouse, distribution centers, cold storage, and more we're able to help every one of our partners achieve the goals of their operation. Whether those be to improve a certain jobsite or streamline your operation's entire process, Nucor Warehouse Systems' warehouse experts are prepared to partner with you in developing the highest functioning, most cost-effective system your warehouse can achieve.

APPLICATIONS

E-Commerce

Include multi-level bays that optimize vertical space, automatic storage and retrieval systems, and dedicated flow lines or conveyors for a continuous supply of high-volume products.

Cold Storage

Compact while still allowing ample storage — dense storage arrangements help to keep closely situated goods keep each other cold, reducing overall energy costs and conserving cold storage space simultaneously.

Beverage + Grocery

Create overall slotting and picking efficiencies to maximize your throughput. Designing systems using either roll-form or structural steel, depending on the specific needs of your products.

Retail

Create turnkey, standardized solutions for small and big-box retail environments and customized, one-off racking and storage solutions.

Distribution

High-density automated rack and shelving systems that will save both time and money.

Pharmaceutical

Engineered systems that optimize work flow, increase picking speed and maximize product density in highly regulated storage environments. The constant need to track and ensure accurate product delivery and order fulfillment is critical.

Fulfillment

Being able to temporarily store a high volume of goods in close quarters while being able to easily access and quickly pick those goods is paramount.

Data Centers

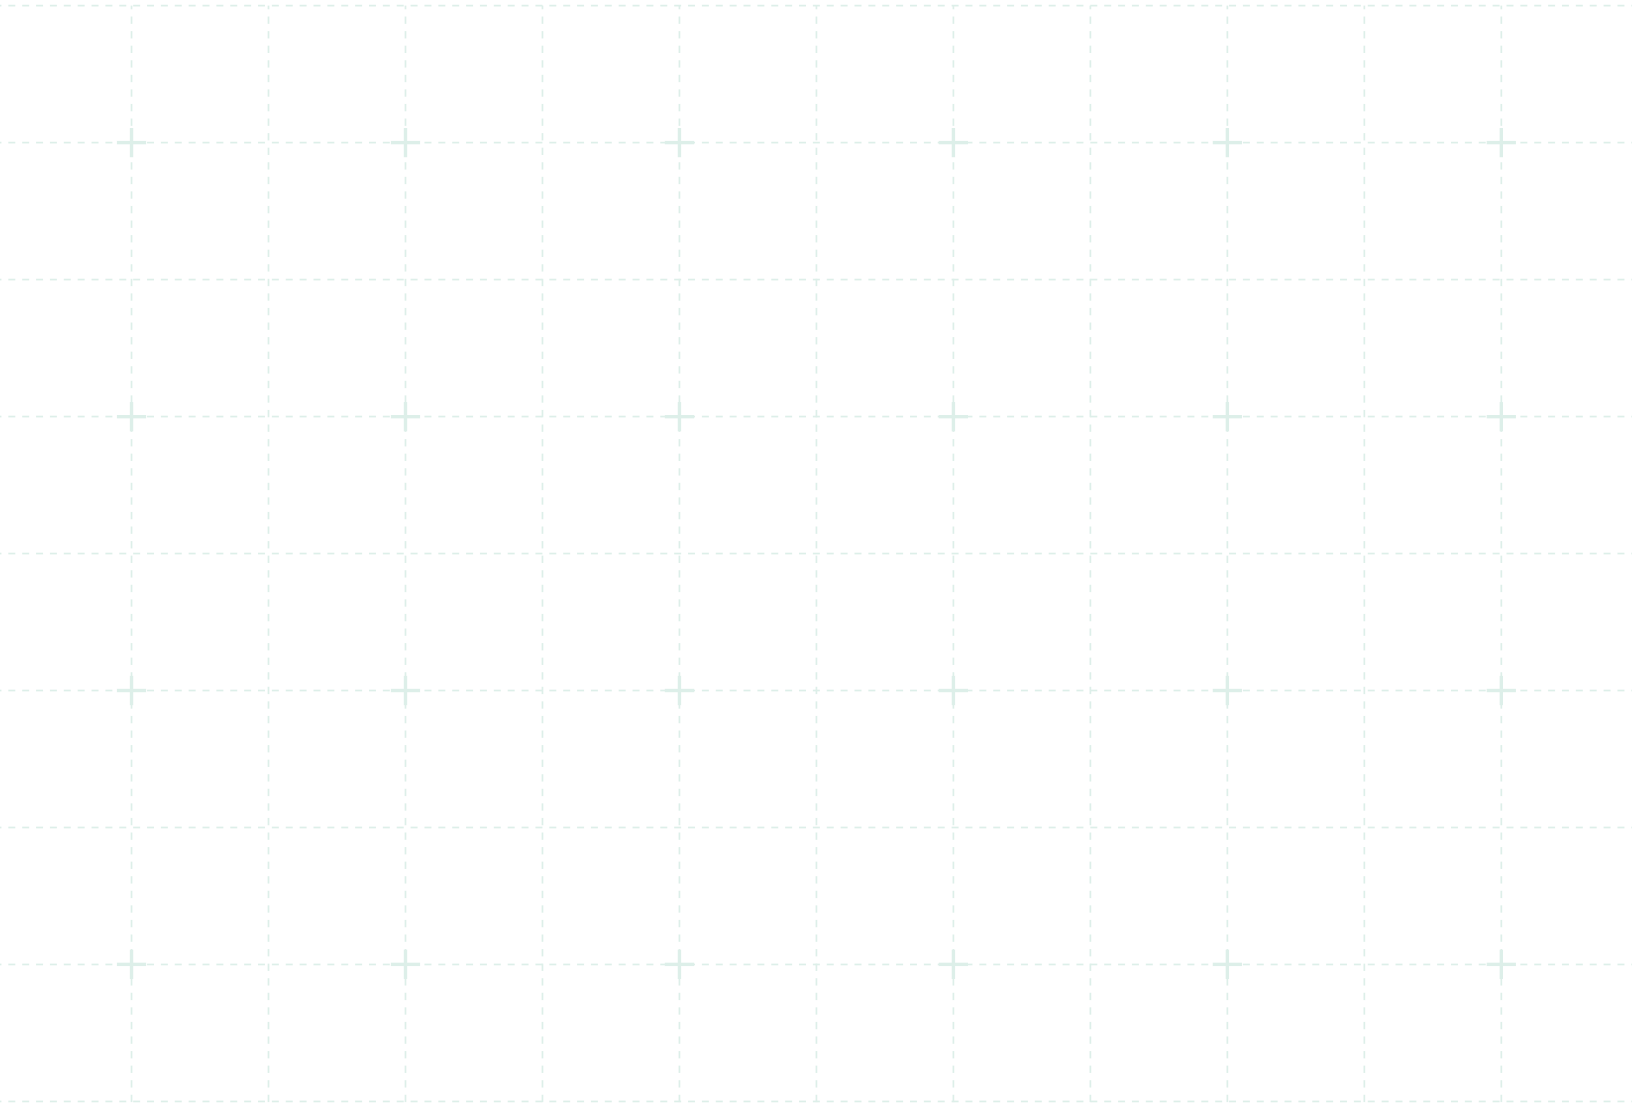

Understanding that when it comes to secure storage and space management, Data Centers require a specialized approach to organizing their operation.

General Warehouse

Offer warehouse owners a complete solution for all their storage needs, including pallet rack, conveyors, mezzanines, pallet trucks, safety equipment and more.

By partnering with Nucor Warehouse Systems, we are able to offer access to solutions from the largest pallet rack manufacturer in the world to meet the needs of your operation. Whether it's new construction or retrofit, we're ready to get started on your next project.
